

Project Name

Human Development Index (HDI) Predictor

Introduction:

User stories describe the requirements from the user's perspective. They help understand what users expect from the Human Development Index (HDI) Predictor application.

User Story 1

As a student, I want to predict the Human Development Index (HDI) of a country so that I can understand its development level.

Acceptance Criteria:

User can enter all required values.

System predicts HDI correctly.

Result is displayed clearly.

User Story 2

As a researcher, I want accurate HDI predictions so that I can compare different countries.

Acceptance Criteria:

System accepts valid input.

Prediction is generated accurately.

Results can be viewed instantly.

User Story 3

As a government official, I want to analyze development indicators so that I can support planning and decision-making.

Acceptance Criteria:

Application predicts HDI using the entered values.

Output is easy to understand.

User Story 4

As a data analyst, I want a Machine Learning model that predicts HDI quickly and accurately.

Acceptance Criteria:

Prediction is generated in a few seconds.

Output is reliable.

User Story 5

As a general user, I want a simple and user-friendly interface so that I can use the application without technical knowledge.

Acceptance Criteria:

Interface is simple.

Input fields are easy to understand.

Prediction result is displayed clearly.

Expected Outcome

The Human Development Index (HDI) Predictor should provide fast, accurate, and user-friendly predictions using Life Expectancy, Education Index, and Income Index. The application should help students, researchers, analysts, and government organizations analyze a country's development level efficiently.
